

**Expert Talk
on
“The Art of Feature Engineering - Where
Data Science Really Begins”**

Organised by
Department of MCA

Date: 23rd December 2025

Venue: MCA Lab

Brief Description of the Event

An Expert Talk on “The Art of Feature Engineering – Where Data Science Really Begins” was organised to provide students with practical insights into the most critical stage of the data science pipeline. The session emphasised how effective feature engineering significantly influences model performance and decision-making in real-world applications. The expert shared industry-oriented perspectives supported by practical examples and case studies.

Topics Emphasised

Importance of Feature Engineering in the Data Science Lifecycle

Feature Engineering is a critical step that converts raw data into meaningful inputs for machine learning models. The resource person emphasised that effective Feature Engineering often has a greater impact on model performance than the choice of algorithms.

Difference Between Raw Data and Engineered Features

The resource person explained that raw data is usually incomplete, noisy, or unstructured, making it unsuitable for direct modeling. Engineered features are refined representations that capture important patterns, enabling models to learn efficiently and produce accurate results.

Feature Extraction, Transformation, and Selection Techniques

The session covered key techniques such as scaling, encoding, and selecting relevant features to reduce dimensionality. These techniques help improve model speed, accuracy, and generalisation while avoiding overfitting.

Impact of Feature Engineering on Model Accuracy and Interpretability

Well-designed features significantly enhance model accuracy and reliability. Additionally, meaningful features improve interpretability, allowing stakeholders to better understand and trust the model's predictions.

Outcomes

- Enhanced understanding of the importance of Feature Engineering
- Ability to identify and create relevant features from raw data
- Improved awareness of real-world data challenges
- Motivation to apply Feature Engineering techniques in projects

Activities Conducted

- Expert lecture with industry-oriented examples
- Demonstration of Feature Engineering techniques using sample datasets
- Interactive discussion and Q&A session

No of Participants: 41

Winners: (if any, for activities conducted): NA

Guest Details: (Name, Designation, Organisation, Location) :

Ms. Maria Sapthika
Software Engineer
Capgemini – Bangalore

Photographs of the Event

The banner features the college's 25th anniversary logo, the Computer Society of India logo, and a background image of a person in a control room with multiple screens. The text includes the event title, date, time, location, and target audience, along with details about the faculty coordinators and convenor.

Expert Talk

The Art of Feature Engineering: Where Data Science Really Begins

Date: 23rd December 2025

Time: 11:00 AM – 01:00 PM

Location: MCA Lab

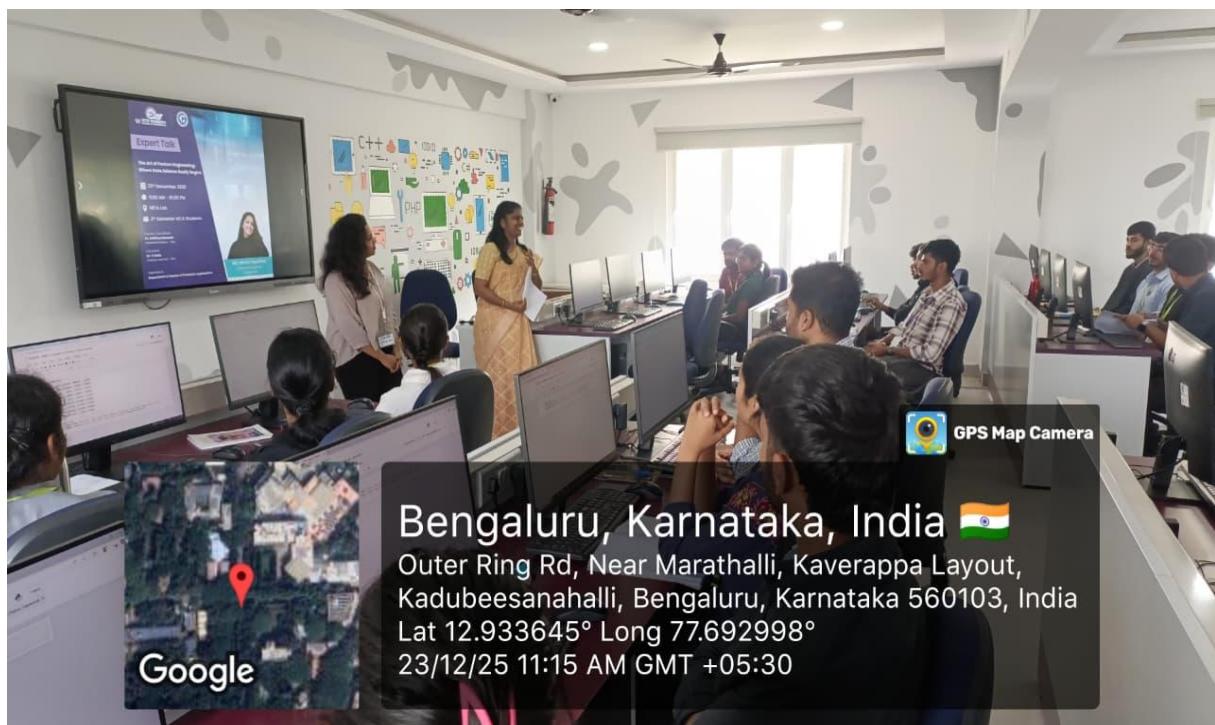

Target Audience: 3rd Semester MCA Students

Faculty Coordinator:
Dr. B Nithya Ramesh
Associate Professor – MCA

Convenor:
Dr. V Asha
Professor and HoD – MCA

Organised by
Department of Master of Computer Applications

Ms. Maria Sapthika
Software Engineer
Capgemini

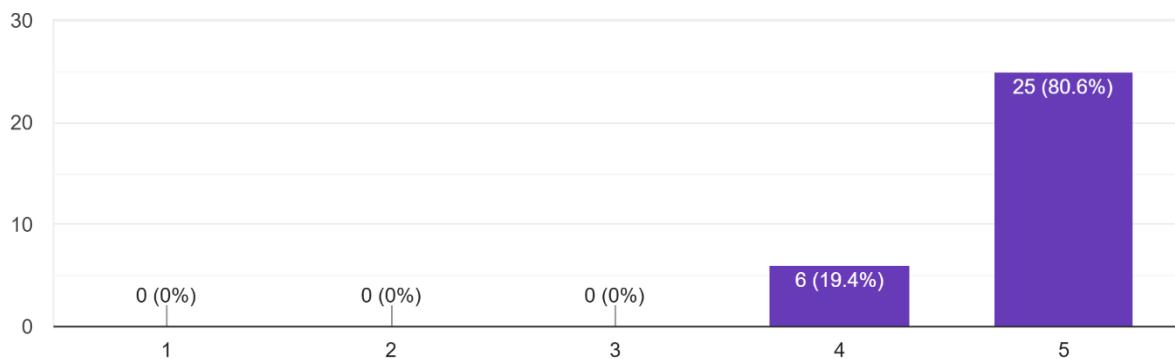

Feedback

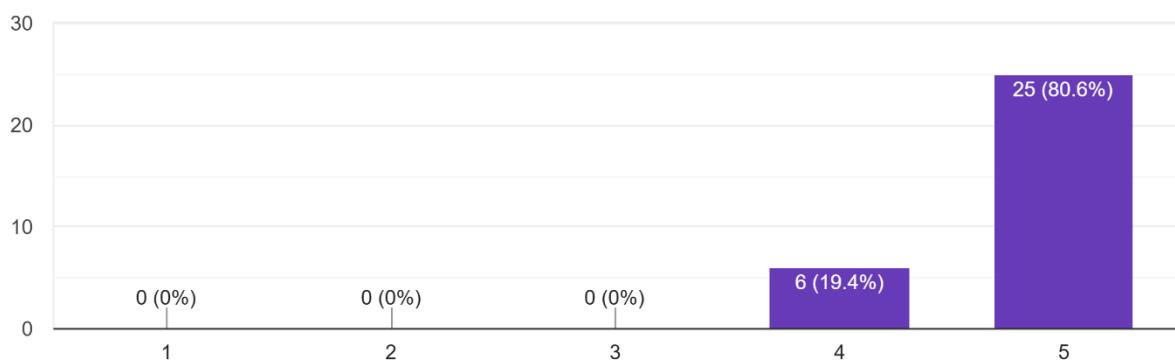

Quality of the training content

31 responses

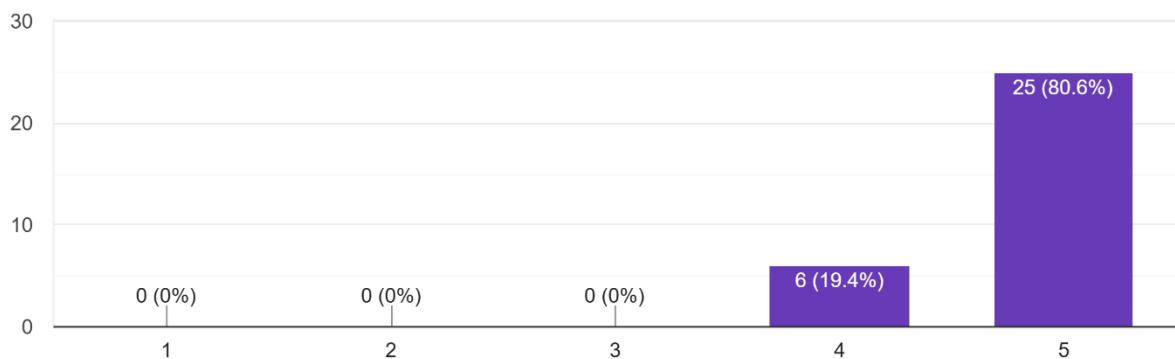

Clarity of the presentation.

31 responses

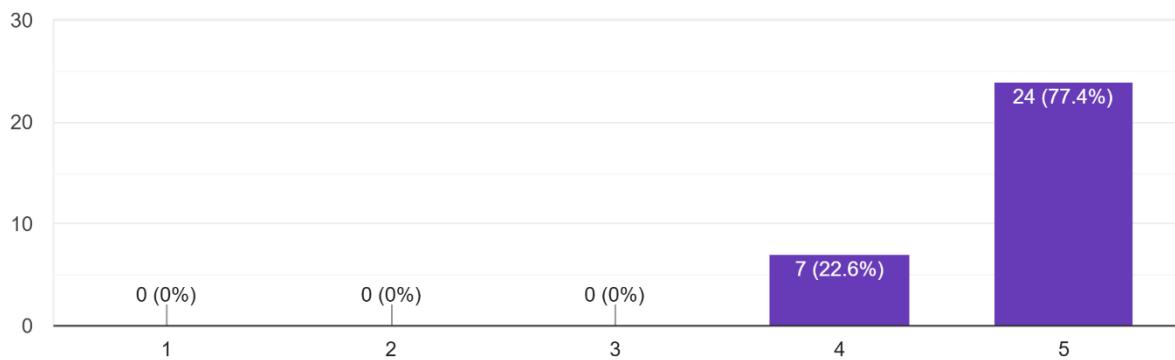

Effectiveness of the examples depicted during the session.

31 responses

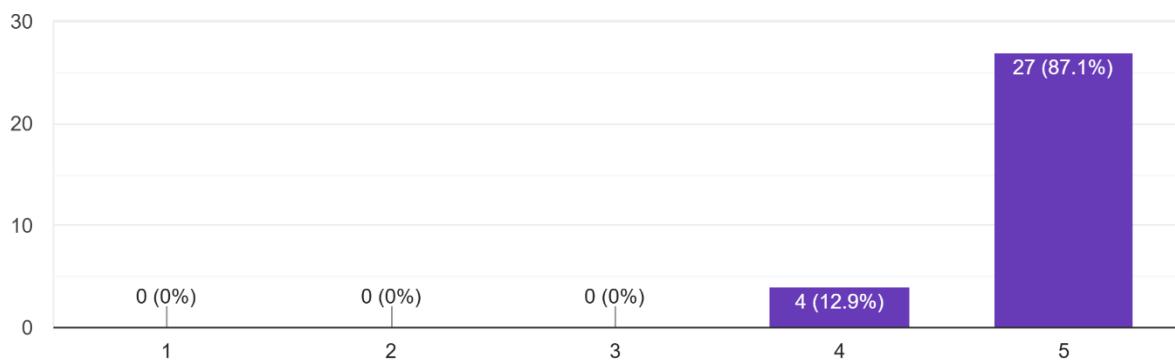

Achievement level in understanding the topics

31 responses

How relevant was the content of the session to your course or academic interests?

31 responses
