

NEW HORIZON COLLEGE OF ENGINEERING

EVENT NAME: “Cloud Data Pipeline Bootcamp- Azure Edition”

Organized by

Department of MCA In Association With CSI

DATE: 13th December 2025

VENUE: MCA Lab

BRIEF DESCRIPTION OF THE EVENT:

The workshop **Cloud Data Pipeline Bootcamp – Azure Edition** was conducted to introduce students to core concepts of cloud-based data engineering and modern data pipeline architectures. The session provided MCA first-year students with hands-on experience in designing data workflows, ingesting and transforming data, and building end-to-end data pipelines using Microsoft Azure services. It aimed to strengthen their understanding of cloud data processing, automation, and scalability while equipping them with practical skills required for managing and analyzing data in real-world, cloud-native environments.

Topics Emphasized:

Introduction to Cloud Data Pipelines using Azure

Students were introduced to the fundamentals of cloud data engineering and the concept of data pipelines. The session explained how data flows from source systems to storage and analytics platforms using cloud-native services in Microsoft Azure.

Data Ingestion and Storage in Azure

Resource person demonstrated methods to ingest data from different sources using Azure services such as Azure Data Factory and Azure Blob Storage. Students learned how raw data is collected, stored, and organized in the cloud for further processing.

Data Transformation and Processing

The workshop covered basic data transformation techniques using Azure tools. Students understood how data can be cleaned, transformed, and prepared for analytics, emphasizing the role of scalable cloud processing in handling large datasets.

End-to-End Cloud Data Pipeline Implementation

A simple hands-on pipeline was designed and demonstrated, showing the complete workflow from data ingestion to storage and processing in Azure. This practical exposure helped students connect theoretical concepts with real-world cloud data pipeline implementation and reinforced their understanding of modern data engineering practices.

Outcomes:

- Students gained hands-on experience in understanding cloud data pipeline concepts using Microsoft Azure.
- Understood how to ingest data from multiple sources and store it in cloud storage services.
- Learned the structure, components, and benefits of cloud-based data pipelines.
- Designed and observed the execution of a simple end-to-end data pipeline on Azure.
- Understood the complete data flow from data source → ingestion → storage → processing in a cloud environment.

Activities Conducted:

- Demonstration of Azure cloud services relevant to data pipelines, such as Azure Data Factory and Azure Blob Storage.
- Live walkthrough of creating and configuring a basic data pipeline in Azure.
- Hands-on activity: Students explored pipeline components and monitored data movement and execution.
- Q&A, interaction, and clarification session with the resource person.
- Discussion on industry roles related to cloud data engineering, data analytics, Azure cloud services, and data pipeline architecture.

NO. OF PARTICIPANTS: 44

WINNERS (if any, for activities conducted): NA

GUEST DETAILS (Name, Designation, Organisation, Location) :

Ms.Somapudi Sai Geetanjali

Data Engineer, TE Connectivity, Bangalore

Workshop

Cloud Data Pipeline Bootcamp - Azure Edition

📅 13th December 2025

🕒 09:00 AM to 12:00 PM

📍 MCA Lab

👥 I Semester MCA Students, B Section

Ms. Somapudi Sai Geetanjali
Data Engineer, TE Connectivity
Bengaluru

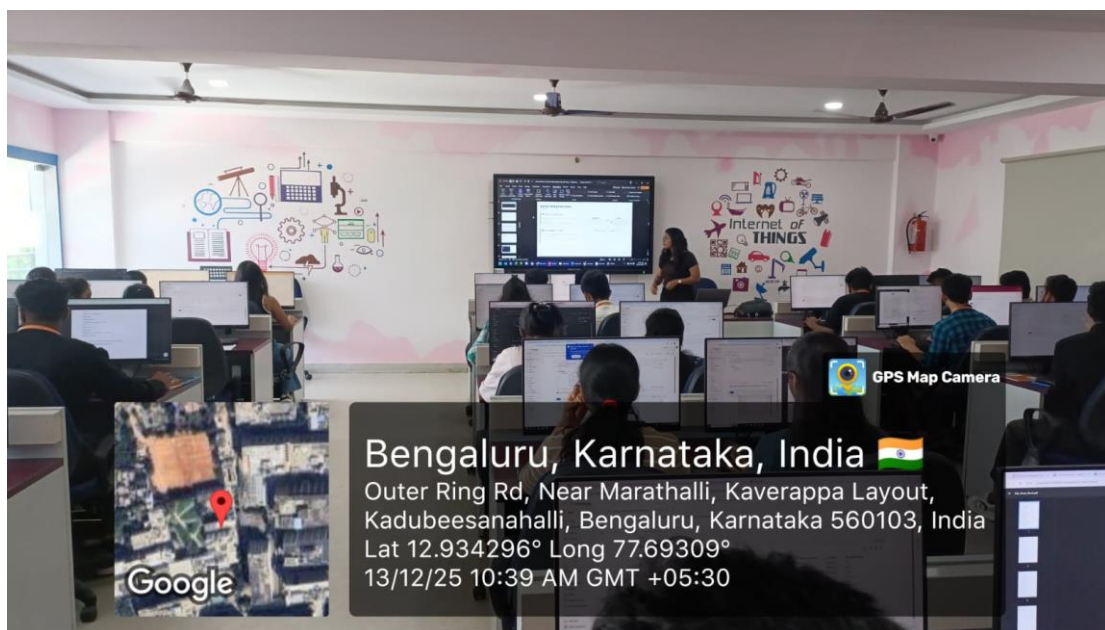

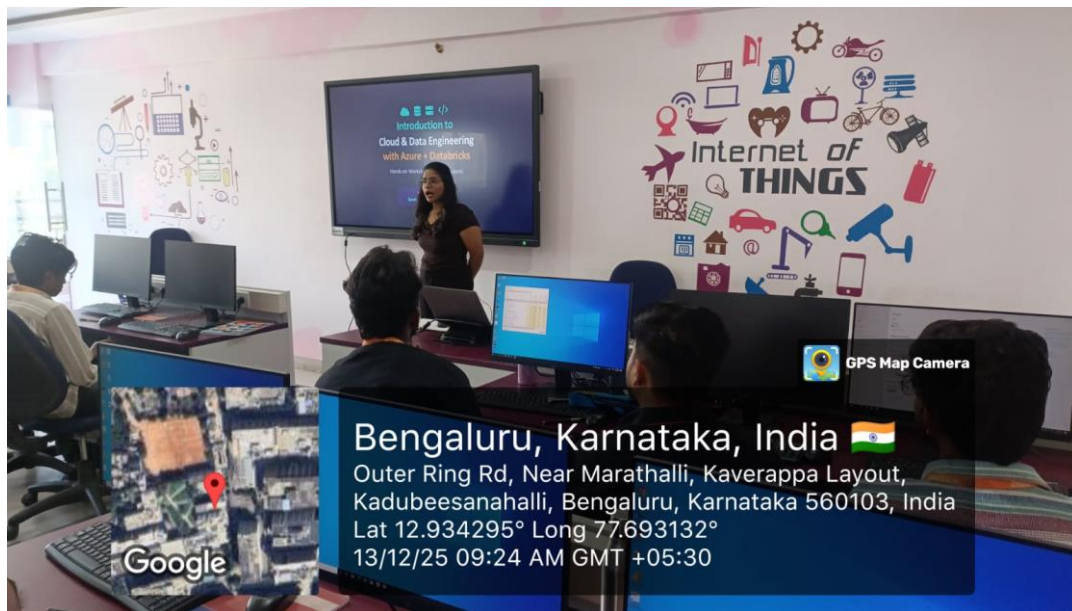

Faculty Coordinator
Mrs. Kalaivani A
Sr. Assistant Professor,
MCA Department, NHCE

Convenor
Dr. V Asha
Professor & HoD,

Comments if any

10 responses

Good
NA
No
.
It's nice and use full
Had a great session
N/A
Nice
It was good!!
