

NEW HORIZON COLLEGE OF ENGINEERING

**Expert Talk
on
“Design and Development of
Interactive JAVA Applications”**

**Organised by
Department of MCA**

Date: 10th January 2026

Venue: B 305

Brief Description of the Event

The Department of MCA successfully organised an Expert Talk on “Design and Development of Interactive Java Applications,” aimed at enhancing students’ understanding of building user-friendly, interactive, and event-driven Java applications using modern GUI frameworks and best programming practices.

Introduction of the Resource Person

Ms. Niveditha M H, a student from MCA, I Semester – Section B, introduced the resource person, Mr. Maddi Abhilash, to the gathering. He currently serves as a Senior Software Developer at Anthology Inc. With strong expertise in Java Application Development, Event-Driven Programming, and Enterprise-Level Software Design, Mr. Abhilash has worked extensively on developing interactive applications with robust user interfaces and efficient backend integration. His professional experience includes designing scalable Java applications, implementing GUI components, and applying best practices for maintainable and reusable code.

Content Delivery by the Resource Person

Mr. Maddi Abhilash delivered an informative and engaging session focusing on the design principles and development process of

interactive Java applications. The key topics covered during the session were:

- Introduction to interactive Java applications
- Java GUI frameworks (AWT and Swing)
- Event-Driven Programming in Java
- Handling User Actions and Events
- Designing User-Friendly interfaces
- Best practices for interactive application development

The session began with an overview of interactive applications and their importance in modern software systems. Mr. Abhilash explained the role of Java GUI components in creating responsive applications and discussed how event handling enables user interaction. He demonstrated the use of buttons, text fields, labels, and event listeners to build simple yet effective interfaces.

He further emphasised design considerations such as Layout Management, Usability, and Modular Coding. Practical examples were used to explain how user actions such as button clicks and text input are handled through event listeners, along with concepts like event delegation, adapter classes, and efficient UI update mechanisms, making applications more dynamic and interactive.

Interactive Session with Students

The session concluded with an interactive Q&A segment, during which students actively engaged by raising questions on Java GUI components, event-handling mechanisms, and real-time application development challenges. The discussion enabled students to clarify their doubts and gain deeper insights into the design of interactive Java applications.

Activities Conducted

During the interactive session, the resource person presented scenario-based activities related to real-world Java application development. One such scenario involved designing a simple student registration interface using Java AWT, where students were asked to identify suitable components and event-handling techniques. This activity encouraged students to apply theoretical concepts and improved their understanding of interactive Java Application Design.

No. of Participants: 52

Winners (if any, for activities conducted): NA

Guest Details (Name, Designation, Organisation, Location):

Mr. Maddi Abhilash

Senior Software Developer

Faculty Coordinator
Dr. Sukanya N S
Associate Professor - MCA

Convenor
Dr. V Asha
Professor and HoD - MCA

Organised by
Department of Master of Computer Applications

Feedback

Quality of the training content

50 responses

Clarity of the presentation.

50 responses

Effectiveness of the examples depicted during the session.

50 responses

Achievement level in understanding the topics

50 responses

How relevant was the content of the session to your course or academic interests?

50 responses
